ecobeco and PEG Environmental Solutions Help Condominiums Go Green

ecobeco and PEG Environmental Solutions have joined forces in a joint project to provide energy auditing services and lifestyle coaching to condominiums and multi-family homes. This new service focuses on the solutions that lower operating costs and reduce a building's environmental impact. Community members can enjoy reduced bills and maintenance fees as well as the sense of pride that comes from being responsible environmental stewards working to develop a more sustainable future.

Condominium owners and building managers can select from the following 3 programs. Renters can approach your management company about implementing these programs. Contact ecobeco at (240) 396-2141 or info@ecobeco.com to find out how ecobeco and PEG can help your condominium.

Program 1 - Tenant Education and Home Product Upgrade Program. This provides a best practices education program to residents along with an opportunity for residents to purchase eco-friendly products and/or to have a personal visit by an ecoAdvocate.

Program 2 - Common Area Optimization Program. This looks at the lobby, common rooms, hallways, garages and other areas where lighting and temperature controls can be optimized, and windows and doors weatherized. Several apartments are analyzed using blower door testing and an infrared camera to develop energy-saving opportunities for residents.

Program 3 - Building Baseline Energy Efficiency Analysis Program. This is an Energy Audit based on workups of the building envelope, detailed apartment examination, and detailed evaluation of central plant.

About ecobeco

ecobeco is a provider of Home Energy Audits under the Maryland Home Performance with ENERGY STAR® program with a stated mission to help homeowners simultaneously save energy, money and the environment. ecobeco's energy efficiency experts help consumers achieve this goal by providing prioritized advice along with the products and services that solve customer's concerns around saving money, creating a healthy and safe home, and helping the environment. ecobeco additionally offers energy saving products to clients at their showroom in Rockville, MD., or through their website at <http://www.ecobeco.com> .

About PEG Environmental Solutions

A project design and development firm that has traditionally specialized in risk management and cost-benefit analysis of building and construction projects for commercial business and residential consumers alike. PEG has recently sought to involve itself in the environmental services sector and now provides sustainable design and ecological development services. The firm can be reached or through their website at <http://www.pegenv.com> .
